Subject: NSSE 2007 Institutional Report corrections & updates

Dear EK:

By now you probably have had a chance to review your 2007 NSSE *Institutional Report* binder and download data and additional materials from the Institution Interface. Please note the following corrections and updates as you work to make the best use of your results:

- (1) Pocket Guide Report (i.e., "What Students are Saying...") Correction and MS Word Format:
We regret that the percent value for the fifth item under Active Learning in the second column of your Pocket Guide Report is incorrect. In addition, based on a suggestion from a campus contact, we have made the report available in MS Word format in case you'd like to edit the information and images for local purposes. You may now download the corrected PDF version of the report and the MS Word version from the Institution Interface.
- (2) Student-Reported Race Variable Added to Data Files:
Institutional data files (SPSS) originally omitted the 'race05' variable. This variable has now been added to all school data files on the Interface. You may now download a new copy of your data file.
- (3) Mean Comparisons Report Labels:
Your printed report includes incorrect column 2 peer group labels for the Standard Error of the Mean and Effect Size sections of the First-Year Student's Detailed Statistics table (FYSUM tab in the Excel document). Note, the results are correct, but only the column labels are off. Please download the corrected version of the Mean Comparisons report and replace this section in your binder.

As always, we welcome your feedback.

Sincerely,

Todd Chamberlain
Assistant Director for Survey Operations
National Survey of Student Engagement
